

Something Painted™

CHALKY FINISH FURNITURE PAINT

How to use Chalky finish furniture Paint...

Ensure the surface is free of dust, dirt and grease. Remove any loose peeling or flaking paint. Shake paint pot before use.

Something Painted™ Chalky Finish Furniture Paint adheres to almost any surface, and there is rarely any need to sand before painting.

Apply paint evenly and remove paint drips for a smooth look. The paint is touch dry in about 30 minutes and can be recoated after approx. 1 hour. It is recommended for maximum results that 2 - 3 coats of paint is applied.

When completely dry, sand over with fine sandpaper for a smooth finish. Use a course sandpaper to distress your piece. Wipe over with a dry cloth.

Don't forget that colours can be mixed i.e. Antique White can be used to lighten colours.

Rinse brushes in water and hang upside-down to dry to increase longevity.

Applying finishing Polish...

Something Painted™ Finishing Polish is not required but does add protection and durability and gives the surface a high-sheen.

It's really easy to get sensational results. Using a cloth or brush apply the polish sparingly. Remove excess polish. Less is more, so there's no need to apply the polish too thickly. The polish will dry immediately after you've applied it. Work small areas at a time so the polish doesn't dry before you get to work it in.

To create an aged, rustic effect; apply Something Painted™ Dark Polish over the surface until the desired result has been achieved.

To finish, buff the surface with a dry cloth. Repeat buffing after 24 hours for a shiny look.
